and latex-tikz codes from

[https://github.com/Rahul27n/EE3900/blob/main/Gate\\_Assignment\\_2/Gate\\_Assignment\\_2.tex](https://github.com/Rahul27n/EE3900/blob/main/Gate_Assignment_2/Gate_Assignment_2.tex)

It is given by :

$$H'(s) = \frac{1}{s(s + \frac{1}{5})} \quad (2.0.2)$$

$H'(s)$  is the Laplace transform of  $x(t)$ . Hence the step response  $x(t)$  using the Lemma-2.1 is given by:

$$x(t) = 5(1 - e^{-\frac{t}{5}})u(t) \quad (2.0.3)$$

Hence the correct answer is option (B).

## 1 QUESTION: GATE EC 2007 Q.49

The frequency response of a linear, time-invariant system is given by :

$$H(f) = \frac{5}{1 + j10\pi f}$$

The step response of the system is:

- (A)  $5(1 - e^{-5t})u(t)$
- (B)  $5(1 - e^{-\frac{t}{5}})u(t)$
- (C)  $\frac{1}{5}(1 - e^{-5t})u(t)$
- (D)  $\frac{1}{5}(1 - e^{-\frac{t}{5}})u(t)$

Fig. 4: Step response  $x(t)$  vs  $t$

## 2 SOLUTION

**Lemma 2.1** (Table of Laplace Transforms).

Time Function	Laplace transform of $f(t)$
$f(t) = \mathcal{L}^{-1}\{F(s)\}$	$F(s) = \mathcal{L}\{f(t)\}$
$u(t)$	$\frac{1}{s}, s > 0$
$\frac{1}{a}(1 - e^{-at})u(t)$	$\frac{1}{s(s+a)}, s(s+a) > 0$

The frequency response  $H(f)$  of the system can be rewritten as follows :

$$H(s) = \frac{5}{1 + 5s} = \frac{1}{s + \frac{1}{5}} \quad (2.0.1)$$

where  $s = j\omega$  and  $\omega = 2\pi f$ . To find the step response  $x(t)$  we need to multiply  $H(s)$  with  $\frac{1}{s}$ .
