1 QUESTION: GATE EC 2005 Q.85

A non-zero sequence $x(n)$ is given by:

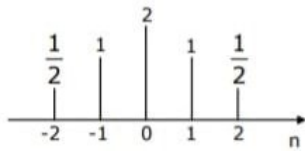

Fig. 0: $x(n)$

The sequence

$$y(n) = \begin{cases} x\left(\frac{n}{2} - 1\right), & \text{for } n \text{ even} \\ 0, & \text{for } n \text{ odd} \end{cases}$$

is given by:

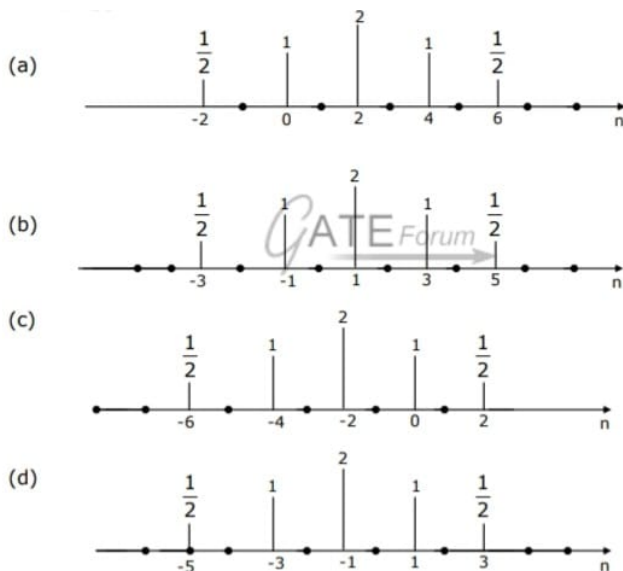

Fig. 0: Options

2 SOLUTION

We can write $x(n)$ as follows:

$$x(n) = \frac{1}{2}\delta[n+2] + \delta[n+1] + 2\delta[n] + \delta[n-1] + \frac{1}{2}\delta[n-2]$$

where $\delta[n]$ is the discrete unit sample function defined as follows:

$$\delta[n] = \begin{cases} 1 & \text{if } n = 0 \\ 0 & \text{otherwise} \end{cases} \quad (2.0.1)$$

We clearly have:

$$y(-2) = x(-2) = \frac{1}{2} \quad (2.0.2)$$

$$y(0) = x(-1) = 1 \quad (2.0.3)$$

$$y(2) = x(0) = 2 \quad (2.0.4)$$

$$y(4) = x(1) = 1 \quad (2.0.5)$$

$$y(6) = x(2) = \frac{1}{2} \quad (2.0.6)$$

We also have :

$$y(-1) = y(1) = y(3) = y(5) = 0 \quad (2.0.7)$$

Therefore we can write $y(n)$ as follows:

$$y(n) = \frac{1}{2}\delta[n+2] + \delta[n] + 2\delta[n-2] + \delta[n-4] + \frac{1}{2}\delta[n-6]$$

Hence the correct answer is option (a).
